

Virtual Multi-Trend

Module for enteliWEB

The module Virtual Multi-Trend (VMT) expands the Management-Software enteliWEB by software based charts for Trend-Log objects in BACnet networks of building automation. Operating technical systems in buildings will be simplified by the VMT module with line and heatmap charts.

The integration in enteliWEB is seamless. VMTs need to be configured manually and get stored preconfigured. Live data from the mapped BACnet Trend-Log objects will be read from the connected BACnet network automatically and seamless supplemented by historical data from the archiver if there is one. The chart timeline can be configured without restrictions.

BACnet Multi-Trend objects are not required but can be optionally mapped to a VMT.

Specifications

Host system

Module

Delta Controls enteliWEB 4.29 or higher

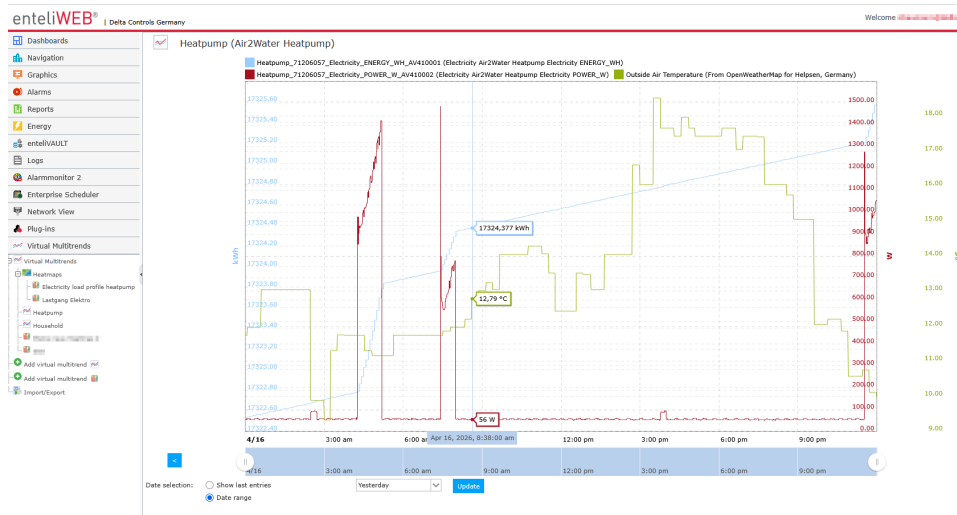

System requirements for host system

See document

„Systemvoraussetzungen für enteliWEB und enteliSAVE“ in latest version

Client browser

All browsers supported by enteliWEB

Example line chart for a heatpump with 3 analog trend curves.

Features des Moduls Virtual Multi-Trend

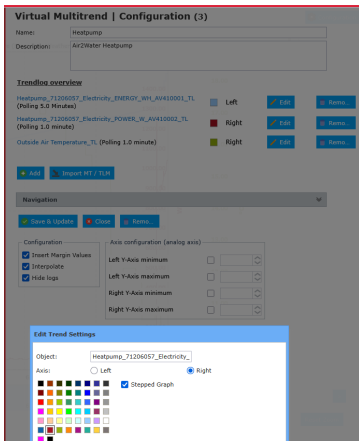

- ▶ Seamless integrated module for the enteliWEB Management-Software
- ▶ Up to 8 BACnet Trend-Log objects in one line chart
- ▶ Heatmap chart to visualize a big amount of data from one Trend-Log object
- ▶ Open configurable timeline
- ▶ Many options to configure the visual presentation of data
- ▶ Download of the chart as a picture file
- ▶ Temporary show and hide individual trend curves in the line chart
- ▶ BACnet Multi-Trend objects are not needed, but supported
- ▶ As monitored object types BACnet analog, binary and multistate are supported
